

**Let's save water &
energy together!**

**Get on board with
your team members!**

Rising prices for electricity and gas pose great challenges for many associations and their members. Saving energy and water is therefore the order of the day. Reducing hot water consumption in the association's properties plays an essential role in this.

That is why we want to draw attention to this issue with the **ENERGIE & WASSER SPAREN.jetzt!** water-saving initiative and make the population aware of how much savings potential there is in this area. The initiative is based on 3 pillars: **INFORM, MEASURE, SAVE**

Because: Saving hot water means an enormous reduction in water and energy consumption as well as a reduction in operating and household costs. If, for example, the water flow in the shower is reduced from an average consumption of 12 l/min. to 7 l/min. this results in a saving of about € 300,- per year for a family of 3!

With our ENERGIE & WASSER SPAREN.jetzt! watersaving initiative we would like to **inform** the population together with you about the enormous importance of the energy saving potential of hot water. For this purpose, we provide free information texts, picture material and much more. In addition, we offer participating clubs and their members a special price on our water and energy saving products. Of course, the clubs itself can also grant an additional subsidy.

First measure, then save: The consumption per minute in the shower or washbasin can be easily measured using a measuring bag or bucket. Based on the measurement results, the individual savings potential can be calculated with the specially programmed savings calculator on www.energie-wasser-sparen.jetzt. The next step is to start saving. With the patented water-saving turbine, which is easy to install on any shower fitting, you can save up to 50% water, energy and thus also costs without having to change your showering habits or replace the shower head. At the same time, you can also save a lot of money on washbasin taps: With innovative flow limiters, you can reduce water consumption to just 5 litres per minute.

Let's start this initiative together and reduce water and energy consumption in your community and throughout Austria in the long term!

Contact us at 07230/7213-741 or by sending a message to greentech@rabmer.at.
We look forward to hearing from you!
