ENERGIE & WASSER SPAREN. *jetzt!*

Take part and save € 100 a year!

Save expensive energy & hot water while showering.

This is easy on the wallet and protects the climate!

Each of us uses 130 litres of water every day for personal hygiene and in the household. This can be quite expensive, because after heating, hot water production requires the most energy in the household. With the current rise in energy prices, it makes sense to save!
How you can reduce your hot water consumption by up to 50% - without losing comfort, without changing your showering habits or replacing your shower head - is shown by the **watersaving initiative Energie & Wasser sparen.jetzt!**

Here's how it works:
Many showers have a water flow rate of 12 to 15 litres per minute - for showers with a flow rate of more than 8 litres per minute, saving hot water makes sense without sacrificing comfort. But only if you know how much hot water you use can you take targeted measures.
You can easily determine your own water consumption in the shower
with a bucket test in **3 steps**:
1. Have a bucket (or container) and a stopwatch (e.g. mobile phone app) ready.
2. Turn on the shower tap fully and fill the bucket with shower water for 1 minute.
3. Measure the filling quantity litres/minute:
    - read off the fill level (if litres are indicated on the bucket) or
    - determine the filling weight with a scale (kg = litre).

By the way, the same measurement can also be made for washbasins!

On the website **energie-wasser-sparen.jetzt** you can now enter the result you have obtained into the online savings calculator.
You will then receive your individual savings potential: This shows how much water, energy, costs and CO_2 emissions can be saved by installing water-saving mini-turbine for the shower and a flow limiter for the washbasin. For a household of 3 people this means a cost saving of around € 300.00 per year!

Save in the long term:
Only those who participate can save in the long term! We are therefore happy to support this initiative and cordially invite everyone to actively save energy and water.

With the Code **XXXX** there is a **XX% DISCOUNT** on all watersaving products in the online shop on:
